

FORAGE RYE (*SECALE CEREALE*)

TURBOGREEN

Winter forage rye

› Our varieties are particularly suited to winter intertillage production and are used as a substratum for bio-gas-/silage production. Important cultivation goals when dealing with fodder rye are to begin growing early in spring and to rapidly build up high dry matter yields. Fodder rye will then provide strong stocking, abundant vegetative growth and high growth length.

Advantages of TURBOGREEN

- › Very strong mass growth at beginning of vegetation
- › Provides high dry matter yields
- › Very adapted to late sowing time - demonstrates its strengths the later the sowing time is

Variety assessment of TURBOGREEN

Mass growth at beginning of vegetation		medium to strong
Plant length		medium
Tendency to lodging		medium to strong
Dry matter yield		medium
Dry matter content		medium
Raw protein content		medium

(1 = very low, very early / 9 = very strong, very high, very late)
